- » **Aqua Booties (dual)** – feet/hands
- » **Back pad** – (13" by 24") – large back area
- » **Multi-purpose wrap** – (10" by 12") with compression wrap – shoulder, knee, back, cervical, elbow

The Medicare Program

The Aqua-Relief System is covered by Medicare. You may be eligible to receive a system at no cost to you. A prescription is required.

POOR CIRCULATION

Diabetes often leads to peripheral vascular disease that inhibits a person's blood circulation. With this condition, there is a narrowing of the arteries that frequently leads to significantly decreased circulation in the lower part of the legs and the feet. Poor circulation contributes to diabetic foot problems by reducing the amount of oxygen and nutrition supplied to the skin and other tissue, causing injuries to heal poorly. Poor circulation can also lead to swelling and dryness of the foot. Preventing foot complications is more critical for the diabetic patient because poor circulation impairs the healing process and can lead to ulcers, infection, and other serious foot conditions.

The most common cause of chronic leg ulcers is poor blood circulation in the legs. These are known as arterial and venous leg ulcers.

Aqua-Relief – about the device

- » Cool or warm water is circulated all around the joint providing optimal 360° treatments.
- » Can provide cool water for 3-5 hours or heat with no time limits.
- » Provides added compression to further reduce pain and inflammation.
- » Reduces chances of skin damage by maintaining a constant safe heat.
- » Reduces the mess of standard ice or hot therapy.
- » Allows movement of the joint without losing the ice.
- » The machine is re-usable.
- » Leak free couplings.
- » 3-prong grounded hospital compliant wall plug.
- » Now available with a UL approved 120volt instant hot feature

Medicare patients...

You may be entitled to our **NEW Aqua-Relief System** at **No Cost to You.**

Introducing an advanced **HOT & COLD WATER THERAPY SYSTEM**

- » Select: "hot water therapy" or "cold water therapy"
- » Improves blood circulation or reduces edema/swelling
- » Reduces pain and discomfort of neuropathy
- » Effective for pain relief in joints and sore muscles
- » Patented foot warmers
- » Covered by Medicare (and many private insurances)
- » The Low Heat setting is Safe for Diabetics

Aqua Relief System

“It is like heaven to wear.”
» Donna Lehman

The Aqua Relief System is a clinical therapeutic pain management and circulatory improvement system that can be used in the home. It's an all-in-one system that combines heat therapy and cold therapy, allowing you to treat an injury, as well as help improve blood circulation and reduce the discomforts associated with Diabetes.

foot discomfort + booties = relief

back pad

bootie photo

*Booties available in standard and large sizes. Therapy socks included with all booties.

The Pain Management Benefits

The Aqua Relief System delivers pain relief to achy feet or hands due to diabetic neuropathy, arthritic pain, or carpal tunnel syndrome. It is a versatile hot/cold pack that will help for both systemic pain conditions as well as part specific pain conditions (knee, back, wrist, shoulder...etc).

The Diabetic Benefits

The Aqua Relief System uses 107F water to help improve blood circulation in the hands and feet. Or, cold water can also be used to reduce swelling that is associated with diabetic neuropathy.

People with diabetes are at special risk of developing foot ulcers, and foot care is an important part of diabetes management.

Other benefits

The Aqua-Relief System can be used for the following applications: back, knee, hip, foot and ankle, hand and wrist, shoulder, elbow, chest, breast, face and jaw, head, neck, and other specific applications.

- » The ARS system is adjustable from 40°F and 120°F – allowing for a therapeutic advantage.
- » Safe, controlled, and time-saving to both the patient and the care giver.
- » 5-8 hrs of continuous cold therapy.
- » All body parts can be treated; Custom booties allow for treatment of circulatory and pain problems in the hands and feet.

People with diabetes are at risk for blood vessel injury, which may be severe enough to cause tissue damage in the legs and feet extremities.
